Poller, R. C., 1
Shibaev, V. P., 117

SUBJECT INDEX

Acids aliphatic, 126, 146
Acrolein polymerization, 69, 82
Acrylonitrile polymerization, by azo anion radicals, 97
  by azomethine anion radicals, 91
  by azoxy anion radicals, 97
  by gamma rays, 109
  by ketyls, 75, 86
  by nitrile anion radicals, 92
  by nitro anion radicals, 98
  by nitroso anion radicals, 98
  by potassium metal, 55
  electroinitiated, 105
  photoinitiated, 111
Alcohols aliphatic, 126, 146, 229
Alkaline earth metals, 65
n-Alkanes, 126
Allylic chlorine, 8, 28, 34, 38, 39, 40
Allylic hydroperoxides, 20, 21
Allylic shift, during reaction of organotin compounds with allylic chlorohydrocarbons, 38, 40
Atmosphere, influence on degradation of PVC, 20
Autocatalysis, 19
AZBN (azobisisobutyronitrile), effect on rate of dehydrochlorination of PVC, 21
Azobenzene, 97, 102
Azomethines, 91, 102
Azoxybenzene, 97, 102

Barium soaps, stabilizing effect in PVC, 26, 28, 29, 30, 34
Benzene formation, during PVC degradation, 21
Block polymers, 67, 71, 75, 88, 89
"Bound" solvent, 235
Bragg angle, 154
Branching, characterisation of, 11
  effect on dehydrochlorination of PVC, 9, 16
  sites in PVC, 9
Butadiene, copolymerization with dihalides, 62
  polymerization
    by sodium metal, 56
    by sodium naphthalene, 67
    electroinitiated, 108

Cadmium soaps, stabilizing effect in PVC, 26, 27, 28, 30, 34
Calcium soaps, stabilizing effect in PVC, 26, 29, 30
Chain ends of PVC, unsaturation at, 10
Charge transfer complex, 110
Chloral polymerization, 84
Chlorides of aluminium, cadmium, cobalt, iron, magnesium, nickel, tin, and zinc, effect on rate of dehydrochlorination of PVC, 31, 32
Chlorination of PVC, 18
Chlorine atoms, detection in PVC dehydrochlorination, 22, 24
Chloromercury acetaldehyde, 2
Conversion extent, influence on PVC degradation, 18, 19
Copolymerization, of vinyl chloride with, 1-chloropropene, 12
  2-chloropropene, 11
  2,4-dichloropent-1-ene, 12
  lead acrylate, 45
  lead undecylenate, 44
  unsaturated organotin compounds, 45
Copolymers, glass temperatures, 180
  phase diagrams, 161
  structure, 134, 151
Copolymers of PVC, degradation of, 2
Copolymers of vinyl chloride, stability of, 12
Crotonaldehyde polymerization, 82

Deuterated poly(vinyl chloride), 18
Deuterated vinyl chloride, 10
Dibutylchlorotin acetate, 39
Dibutylchlorotin laurate, 38
Dibutyltetrachlorostannate ion, crosslinking of PVC, catalysis by, 41
  from reaction of dibutyltin stabilizers and hydrogen chloride, 41
Dibutyltin compounds, inhibition of radiation induced grafting to PVC, 4
Dibutyltin dicarboxylate, stabilizers for PVC, 35, 36, 38, 39, 40, 41, 44
Dibutyltin dichloride, catalytic effect on exchange reactions of organotin compounds and chlorohydrocarbons, 37, 38
Dibutyltin dimercaptide, stabilizers for PVC, 35, 36, 38, 39, 40, 44
Dielectric constant, influence on degradation of PVC, 19
Dielectric properties, 184, 186
Diels-Alder additions, and PVC stabilization, 32
  of organotin maleates to dienes, 39, 43
Diethylaluminium chloride, reaction with PVC, 32
Dimethyl terephthalate, 103
Dipole moment, 223
Dithizone, estimation of zinc, 29

Electrochemical initiation, 79, 80, 98, 104
Electron microscopy, 120, 163, 239
End groups, influence in PVC degradation, 17, 18
Energy of activation, in PVC dehydrochlorination, 13
in pyrolysis of chlorohydrocarbons, 6
Enthalpy component of the elastic force, 207
Entropy component of the elastic force, 207
Epoxy compounds, influence on stability of PVC, 3, 33, 34
ESR spectra, in PVC degradation, 12, 13, 16, 17, 22, 24, 44
Ester exchange reactions, with PVC, 11
Ethylene oxide polymerization, 71, 86, 96
Ethylene sulfide polymerization, 73, 84, 94
Extraneous impurities in PVC, ill effect of, 5, 6

Flexibility, 216
Flory theory, 162
Flow activation energies, 200
Flow birefringency, 216
Flow curves, 195
Fluorenone, 102
Free radical mechanism of thermal dehydrochlorination of PVC, 23, 24
Friction coefficient, 197
Friedel-Crafts catalysts, 32

Gas chromatography of products, from thermal degradation of plasticised PVC, 31
Gas-crystalline state, see also Rotation: crystalline state, 136
Gels of comb-like polymers, heats of fusion, 232
melting temperatures, 231
structure, 241
Glass temperature, 128
Graft copolymers, 72, 80, 87, 92, 93, 101
Graft copolymers of PVC, reduced stability of, 23
Group IIA, metal soaps, 29
Group IIB, metal soaps, 29

Hydrocarbons, 129, 230
Hydroperoxide deactivation, 42

Infrared spectra, 138, 155
Internal double bonds in PVC, 11
Internal stabilization of PVC, 44
Ionic mechanism
for PVC degradation, 19, 22, 23
for reaction or organotin compounds with chlorohydrocarbons, 39
Isoprene polymerization, 67
Isotope effect, 10
Isotopic tracer techniques
in PVC dehydrochlorination, 24
in PVC stabilization, 26, 35

Kerr constant, 221
Ketyls, 74–86, 102
Kinetic chain length, in PVC dehydrochlorination, 12, 16
Kinetic studies of gas phase decomposition of chlorohydrocarbons, 6
of PVC dehydrochlorination, 2
of reactions between organotin compounds and chlorohydrocarbons, 37, 38
Kuhn's segment, 218

Lead acrylate, copolymerization with vinyl chloride, 4
Lead soaps, stabilizing effect in PVC, 28, 30
Lead undecylenate, copolymerization with vinyl chloride, 4
Lewis acidities, of metallic derivatives used in PVC stabilization, 30, 37
Liquid-crystalline systems, 119, 136
Lithium amide, 53
Lithium metal, 52, 58, 61, 63
Long spacings, 126, 143, 156

Maleic anhydride, 110
Mark-Kuhn-Houwink equation, 227
Mechanism of thermal dehydrochlorination of PVC, 23
Mechanochemical initiation, 108
Mercaptans, addition to double bonds, 43
as transfer agents, 43
effect of mixtures with dialkyltin dichlorides on stability of PVC, 43
Metal chlorides, influence on stability of PVC, 31
Metal powders, effect on stability of PVC, 34
Metal soaps, for thermal stabilization of PVC, 25
Metal solutions, 52, 54, 56, 66
Methacrolein polymerization, 70, 82
Methacrylonitrile, 52
Methyl methacrylate polymerization, by azo anion radicals, 97
by azomethine anion radicals, 91
by azoxy anion radicals, 97
by ketyls, 75
by metal amides, 53
by nitrile anion radicals, 93
by sodium naphthalene, 67

electroinitiated, 104, 105
photoinitiated, 111
α-Methylstyrene, copolymerization with dihalides, 61
polymerization, by potassium metal, 59
by sodium metal, 59, 60
by sodium naphthalene, 67
electroinitiated, 107
Methylvinylsulfone polymerization, 55
Mixtures of polymers, thermal degradation of, 2
Model compounds, for PVC high molecular weight, 6, 12
for PVC low molecular weight, 6, 10
for PVC reaction with stabilizers, 27, 28, 30
Molecular weight, influence on PVC degradation, 18, 19
Mooney-Rivlin equation, 213
Morphology, 163

Nitric oxide, as an inhibitor for PVC dehydrochlorination, 21
Nitrobenzene, 98
accelerating effect on rate of dehydrochlorination of PVC, 16
Nitroethylene, 109, 110
Nitrosobenzene, 98, 102
NMR spectroscopy, 12

Octamethylcyclotetrasiloxane, 73
One-layer packing, 125, 150
Optical anisotropy, 216
Optical diffractometry, 120
Organotin compounds, as stabilizers for polyolefins, 4
as stabilizers for PVC, 35
comparison of the order of their stabilizing powers for PVC with their reactivity towards chlorohydrocarbons, 39, 40
complex formation, 36
exchange reactions with allylic chlorocompounds, 37, 38, 39
exchange reactions with tertiary chlorocarbons, 38, 39
Organotin stabilizers, reaction with hydrogen chloride, 42, 43
Oxygen, deleterious effect on PVC stability, 16, 20, 24
Ozonolysis, of PVC, 10, 13, 20

n-paraffins, 122, 126
layer packing, 146
Peroxide decomposers, 42
Peroxides, influence on PVC degradation, 21
Phenolysis reaction, 11
Phenylvinylsulfone, 56
Phosphites, influence on stability of PVC, 31, 32, 33
Poly (*n*-acyl styrenes), 118, 129
Poly(*n*-alkyl acrylamides), 129
degree of crystallization, 159
heats of fusion, 158
melting temperature, 158
Poly (*n*-alkyl acrylates), 118, 122
amorphous state, 128
crystalline state, 150
degree of crystallization, 159
degree of orientation, 155
dielectric properties, 173, 184, 223
diluted solutions, 218
gels, 229
heats of fusion, 158
melting temperatures, 158
spin lattice relaxation time, 175
Poly (2-*n*-alkyl-1,3-butadienes), 129
Poly (*N*-alkylmaleinimides), 123
dielectric properties, 179
Poly (*n*-alkyl methacrylates), 122
amorphous state, 128
crystalline state, 151
degree of orientation, 155
dielectric properties, 173, 184, 223
diluted solutions, 218
heats of fusion, 158
melting temperatures, 158
spin lattice relaxation time, 175
Polychloroprene-poly(methyl methacrylate) mixtures, thermal degradation of, 2
Polyene sequences, 13, 16, 43
dependence on temperature of PVC degradation, 43
Poly(fluorine-*n*-alkyl acrylates), 129
Poly(methyl methacrylate), thermal degradation of, 2
Poly(α-olefins), isotactic, 118
amorphous state, 121
crystalline state, 130, 141
relaxation processes, 169, 225
Polyols, influence on stability of PVC, 31, 32
Polyphenylmethacrylic esters of *n*-alkoxybenzoic acids, amorphous state, 123
solutions, 220
Poly(vinyl-*n*-alkyl esters), 118
amorphous state, 129
crystalline state, 151
dielectric properties, 174, 185, 223
diluted solutions, 218
spin lattice relaxation time, 176
Poly(vinyl-*n*-alkyl ethers), 118
amorphous state, 129
Poly(vinyl chloride), dehydrochlorination, 1

kinetic studies of dehydrochlorination, 2
model compounds, 6
stabilization, 1
structures, thermal stability of, 5
thermal dehydrochlorination, 2
Potassium amide, 53
Potassium metal, 53, 54, 59
Propylene oxide polymerizaion, 86, 96, 109
Propylene sulfide polymerization, 73, 85, 94
PVC, see poly(vinyl chloride)
Pyridine-*N*-oxide, 99
Pyrolysis, of chlorohydrocarbons in the gas phase, 6
of chlorohydrocarbons in the liquid phase, 10

Radiation-induced initiation, 109
Radical chain processes, disruption of, 42
Radical inhibitors, effect on rate of dehydrochlorination of PVC, 21, 24
Radioactiver stabilizers for PVC, 26, 27, 35, 37
Relaxation processes, 168, 178
Rotation–crystalline state, 136

Second virial coefficient, 233
Segment anisotropy, 218
Sodium amide, 53
Sodium metal, 54, 56, 59, 60, 66, 74–104
Sodium naphthalene, 66–74, 84
Solvent, influence on degradation of PVC, 19
Stabilization of PVC, 1
by copolymerization with lead undecylenate, 4
by copolymerization with thermally stable monomers, 4
by epoxy-plasticizers, 31
by metal soaps, 25
by organotin compounds, 35
by phosphites, 31
by polyols, 31
internal, 44
Stabilizers, desirable features in PVC, 25
for free radical degradation of PVC, 44
Statistical theory of elasticity, 203
Stilbene, *trans*, 90, 102
Structural irregularities, characterization of in PVC, 10
effect on PVC degradation, 16
Styrene, copolymerization with dihalides, 61
polymerization, by ketyls, 75
by potassium metal, 54
by sodium metal, 87
by sodium naphthalene, 66
electroinitiated, 105
Styrene oxide polymerization, 85, 96
Styrene sulfide polymerization, 84, 94
Supermolecular structure, 163
Syndiotactic PVC, 16
Synergism, in PVC stabilization, 26, 28, 29, 34

Tetraphenylbutane, 89, 102
Tetraphenylethylene, 90, 102
Thermal coefficient of unperturbed macromolecule dimensions, 212
Thermal stabilization of PVC, mechanisms of, 24
Thermoelastic curves, 206
Thermographic investigations, 133, 231
Thermogravimetric analysis, 12
Tributylstannyl lithium, treatment of PVC, 42
Tributylstannyl methacrylate, copolymerization with vinyl chloride, 45
Triphenyl phosphine, 111
Triphenyl phosphite, 111
Triphenylstannyl lithium, treatment of PVC, 42
Triplet state, in sequences of conjugated double bonds, 16
Two-layer packing, 150

Unimolecular mechanism of thermal dehydrochlorination of PVC, 23
Unperturbed dimensions of macromolecules, 226
Unsaturated organotin compounds, copolymerization with vinyl chloride, 44
Unsaturation, influence on PVC degradation, 17
N-Vinylcarbazole, 90

Vinyl chloride, termination in free radical polymerization, 10
Vinyl chloride-vinyl acetate copolymer, thermal stability of, 41
4-Vinylpyridine; copolymerization with dihalides, 62
polymerization, by nitrile anion radicals, 93
by sodium metal, 54
electroinitiated, 108
Viscoelastic behavior, 203

X-ray diagrams, 122, 144

Ziegler-Natta catalysts, 168
Zinc soaps, stabilizing effect in PVC, 26, 29, 30, 34
